

## AMENDMENTS TO THE CLAIMS

### IN THE CLAIMS:

1. (Twice Amended) A remote controlled computer system, comprising:

a computer comprising a wireless receiver;

a hand-held controller comprising a wireless transmitter;

wherein said hand-held controller is configured to send a signal to said wireless receiver upon user actuation, and wherein said computer is configured to perform a power on sequence and to launch a user-defined application program in response to receiving said signal, wherein said wireless receiver and wireless transmitter have a communication range of approximately 200 to 500 feet, and wherein said hand-held controller comprises at least ~~one~~ two assigned buttons ~~button~~ for actuating said signal, and wherein one of said assigned buttons initiates the power on sequence and the launching of a first user-defined application program and wherein another one of said assigned buttons initiates the power on sequence and the launching of a second user-defined application.

2. (Original) The computer system of Claim 1, wherein the wireless receiver and the wireless transmitter are configured for radio frequency communication.

3. Cancelled.

4. (Original) The computer system of Claim 1, wherein said hand-held controller comprises at least two buttons, and wherein said hand-held controller is configured to send a first signal to said wireless receiver in response to user actuation of a first button and a second signal in response to user actuation of a second button, and wherein said computer is configured to launch a first application program in response to said first signal and a second application program in response to said second signal.

5. (Twice Amended) A method of remotely controlling a computer comprising transmitting a signal from a hand-held controller to said computer, and in response thereto, placing said computer in an on state and launching a user specified application program, and wherein said hand-held controller comprises at least two ~~one~~ assigned buttons ~~button~~ for actuating said signal, and wherein one of said assigned buttons initiates the power on sequence and the launching of a first user-defined application program and wherein another one of said assigned buttons initiates the power on sequence and the launching of a second user-defined application.

6. (Original) The method of Claim 5 comprising the step of analyzing said signal to select an application for launch from a plurality of application programs.

7. (Original) The method of Claim 5, wherein said transmitting occurs over a distance of approximately 200 to 500 feet.

8. (Original) A computer system, comprising:

a hand-held controller comprising a radio frequency transmitter, wherein said controller is configured to transmit at least first and second different signals in response to at least first and second different user actuation operations;

a computer comprising a radio frequency receiver; wherein said computer is configured to (1) receive said first and second different signals, (2) analyze said first and second different signals, (3) perform a power up sequence in response to either said first signal or said second signal, (4) launch a first application program in response to said first signal, and (5) launch a second application program in response to said second signal.

9. (Original) The computer system of Claim 8, wherein said first and second different user actuation operations comprise depressing first and second buttons on said hand-held controller.

10. Cancelled.

11. (Twice Amended) A remote control device for a personal computer comprising a hand-held housing containing wireless signal transmission circuitry for communicating with wireless signal receiving circuitry in said personal computer, wherein said housing comprises an attachment device for connecting said remote control device to a key ring, purse handle, or other commonly carried personal item, and wherein said hand-held controller comprises at least two one assigned buttons ~~button~~ for actuating said signal and wherein one of said assigned buttons initiates the power on sequence and the launching of a first user-defined application program and wherein another one of said assigned buttons initiates the power on sequence and the launching of a second user-defined application.

12. (Original) The remote control device of Claim 11, additionally comprising a plurality of user actuated buttons for selecting from a plurality of remotely controlled personal computer functions.

13. (Original) The remote control device of Claim 11, wherein said wireless transmission circuitry is configured to communicate with said wireless receiving circuitry over a range of approximately 200 to 500 feet.

14. (Original) A remote control device for a personal computer comprising:  
a hand-held housing containing wireless signal transmission circuitry for communicating with wireless signal receiving circuitry in said personal computer; and  
at least one user actuated control operative to initiate wireless signal transmission from said remote control device of a command to said personal computer to perform a power up sequence and launch a selected application program.

15. (Original) The remote control device of Claim 14, additionally comprising a second user actuated control operative to initiate wireless signal transmission from said remote control device of a command to said personal computer to perform a power up sequence and launch a different selected application program.

16. (Original) The remote control device of Claim 14, wherein said wireless transmission circuitry is configured to communicate with said wireless receiving circuitry over a range of approximately 200 to 500 feet.

17. (Twice amended) A computer system comprising:  
a computer comprising a power supply and a storage device storing application programs;  
and  
hand-held remote control means for activating said power supply and launching a selected one of said application programs from a distance of approximately 200 to 500 feet, and wherein said hand-held controller comprises at least ~~one~~ two assigned ~~button~~ buttons for initiating a power up of the computer and wherein one of said assigned buttons initiates the power on sequence and the launching of a first user-defined application program and wherein another one of said assigned buttons initiates the power on sequence and the launching of a second user-defined application.

18. Cancelled.

19. Cancelled.
